

DPA FSDO FAASTeam presents:

Managing Power Loss on Takeoff

**ACCIDENT PREVENTION
MANAGING POWER LOSS ON TAKEOFF**
November 6, 2014, 7:00 P.M. at Lewis University

The Chicago Designated Pilot Examiners Association will have several Pilot Examiners present useful information on how to prevent, or when necessary, manage power loss on takeoff. We will include Preflight Risk Assessment, Aeronautical Decision Making and the flight techniques required in the event of engine failure on takeoff. Recent accidents and personal experiences of the Examiners themselves will be discussed. Audience participation is most valuable on this subject and will be encouraged. We can all learn from the experiences of others. The importance of a detailed preflight briefing on the takeoff and actions to be taken in the event that something goes wrong will be covered. Making the selection of appropriate landing sites and what decision to make at different altitudes can save lives and property. This event will be attended by the students and instructors at the University. All local pilots, students and instructors will be welcome, and should gain useful insights into practicing and teaching effective takeoff planning and emergency landings.

Event Details

Thu, Nov 6, 2014 - 19:00 CST
LEWIS UNIVERSITY

One University Parkway
Harold E. White Aviation Center
Romeoville, IL 60446
